

Cold Chain Technology Group introduced by Easia

The Cold Chain Technology Group is a co-operation of Dutch companies, initiated specifically for the Indian market and offering innovative and world class cold chain solutions. The office of CCTG is located in Pune. In the course of this year we expect the group to expand with a few more companies.

[Easia India Associates](#), based in the Netherlands, is the initiator and moderator of the Cold Chain Technology group. Present participants being [RibbStyle](#), [Salco](#) and [Smeva Group](#) with the companies [Geerlofs](#) and [Smeva](#).

The Dutch Cold Chain Industry offers world class quality products with hands-on practical knowledge. As an important agricultural country and being a logistic centre in Europe, Holland has built up a lot of expertise and experience in cooling and logistics. No country in the world has more cooling capacity per capita than Holland. The participants of the Cold Chain Technology Group distinguish themselves by their excellent products and skills.

The Cold Chain Technology Group focuses on special segments like Controlled Atmosphere storages for fruits such as apples, pears and pommegranates, special warehouses for flowers and cold storing facilities for example at airports. Another area is high end retail counters and solutions.

The Cold Chain Technology Group can translate specific requirements into the best technical solutions using high quality expertise, materials and components. Having had wide international experience the Dutch companies can implement projects in co-operation with Indian installers or with Indian manufacturers and suppliers. Their products have very efficient energy use, high quality and good longevity. Specialities of the participants are:

Easia introduced CCTG at [Fresh Produce India](#). This yearly conference and networking event for importers and exporters of fresh fruits and vegetables and business suppliers was held in Pune on 24-26-th of April 2014.

India's need for cold storage

India has a huge backlog for cold storage. Being one of the world's biggest producers of perishable foods, the available present cold storage capacity is only about 10-15% of the required capacity. The loss of agricultural produce is high, with an estimated damage of INR 133 billion every year, according to CIPHET. Another, maybe even bigger damage is loss of export-opportunity for high value goods like mangos, bananas, cut flowers and fish. The economic development of India requires a continued growth of specific cold storage facilities and expertise for the immediate

RibbStyle - high quality, industrial and protective coatings for gastight and vapour-proof storages

Salco - produces a wide range of doors for the industrial, agricultural and refrigeration sectors

Geerlofs - turnkey projects for fresh produce, fruits, vegetables and flowers worldwide

Smeva - manufactures high quality and energy- efficient serve-over-units and displays for foodstuffs.

future and following decades.

The Dutch companies of the Cold Chain Technology Group offer, besides world class quality products, their expertise how to treat different valuable perishables appropriately and how to operate efficiently and energy consciously.

Inquire about our recent worldwide projects for example perishable airport centers, processing plants and CA storages for apples and onions.
